AutoCAD is available in two editions, AutoCAD LT and AutoCAD Pro. AutoCAD LT is limited to 2D drafting and is generally for schools, hobbyists and contractors. AutoCAD Pro is a complete-featured CAD package for professional use. About AutoCAD LT (AutoCAD for Home and School) was introduced in 1997. AutoCAD LT comes with basic drawing and editing capabilities. It lacks most of the features of AutoCAD Pro. AutoCAD LT is available for the following operating systems: Windows, Linux, and Mac OS. I would like to know how this file is structured and what exactly it contains. I would also like to know the different attributes that different user have like UID, GID, Gecos, Gecos_home, Shell, Groups, Home, etc. A: The password database on Linux (aka /etc/passwd) is structured in two parts: PAM realm information The user/group data The file begins with this header: $ /usr/lib/security/pam_limits.so realm= where the realm attribute, if present, indicates the realm (i.e. who's authorized to do what) to use for this user. After that comes a line saying that this is a Unix password database: pam_unix: session and then continues with the user and group data: $ grep -v ^# /etc/passwd root:x:0:0:root:/root:/bin/bash daemon:x:1:1:daemon:/usr/sbin:/usr/sbin/nologin sys:x:2:2:sys:/dev:/usr a1d647c40b

Oxygen-induced retinal reperfusion protects retinal cells from retinal ischemia-reperfusion injury. The blood supply to the retina may be compromised during stroke. Treatment with oxygen before reperfusion is beneficial in stroke, but its effect on the retina remains unclear. The aim of this study was to investigate the effect of oxygen on retinal ischemia-reperfusion (I/R) injury using oxygen-perfusion system and to determine the protective mechanisms involved. The rats were divided into three groups. In the sham group, the rats were subjected to a unilateral ischemic insult (25 min), followed by reperfusion (24 h). In the control group, the rats were treated with normoxia for 10 min before ischemia. In the oxygen-perfusion group, the rats were subjected to the same protocol as in the control group, but with oxygen-perfusion (2.5-3.5 L/min) for 10 min. The infarct volume in the oxygen-perfusion group was significantly smaller than in the control group. Immunohistochemical and real-time polymerase chain reaction analyses revealed that oxygen-perfusion treatment had a higher expression of vascular endothelial growth factor (VEGF) and hypoxia-inducible factor (HIF)-1
